Support Response in	up to 5 working days	1-3 days	12 hours
Price	1999 €/month***	3999 €/month****	please contact us
Discount on yearly subscription	5%	10%	let's talk

* JSON feed represent actual data for the previous day

** Data aggregated by games and providers

*** This plan required minimum 9-month subscription

**** This plan required minimum 6-month subscription

2. FAQ

1) What iGaming data are you gathering?

We are scanning different data sources:

- **Casino sites.** Our crawling system scans casino sites for 40+ markets daily. From the casino sites, we are getting a list of games that they have and games that they place in their lobby. The crawling is performed in an incognito mode which removes any personalized game suggestions from the lobby results. Each game gets points for the position in the lobby and listing in casinos. Higher position - more points.
- **Real money rounds.** The information is delivered from our data partners (casinos, game providers, aggregators)

2) How to optimize the games quantity that will be sent via API?

We can limit the number of games by game providers, and send only top games for specific markets or only the most recent releases. In case you need a specific list of games, you can consider workflow:

Step1: You implement [Games](#) method. Minimum two required attributes: ``id`` and ``gameName``.

Step2: Each day, we pull a list of games from your endpoint.

Step3: We match games with games records in our database.

Step4: You can pull games via [getGamesData](#) method. Attribute ``gameCustomerId`` will contain your game id from Stqp1. This will help avoid the matching process on your side.

3) Where I can find a list of entities and attributes that could be delivered via SlotCatalog API?

Please check our [API specification](#).

4) How often have the game attributes changed?

We are permanently improving information about games. As soon as we receive new data some attributes can be changed. Game tags, links to demo games, RTP values, Hit Frequencies, and survivability tests - examples of attributes that could be changed

5) What is SlotRank?

Short information about SlotRank you can find in the article: [What is SlotRank](#)

6) How is the average position in the casino lobby calculated?

Information about approaches and challenges of calculating the position in the casino's lobby you can find here:

https://docs.google.com/document/d/1HwW0knk8kfmm2c_IQAKCUoxyKx6etd0BCN_ni8TcdlQ/edit#

7) What is Casino Weight?

Casinos' Weight is an index of casino importance in a particular market. In Slot Rank calculation, games get points only for positioning in casinos with enough estimated traffic.

8) What is Provider Rank?

Provider Rank is an index of game provider popularity in a particular market. For more details, see [What is ProviderRank](#)

9) Can I expect new data will come?

Yes. We plan to grow horizontally. Add new markets (US, LATAM, Africa), and track new casinos and providers. Get data from new data partners. And vertically start: Start gathering information from new data sources (Big Wins, Jackpots, Tournaments, Demo games). Join now to get new data cheaper :)

10) Is it possible to switch to another subscription plan?

Yes. Switching to the higher lower Plan is possible

11) How can I increase the quantity of tracked games, casinos, or game providers?

To start tracking new information, contact our manager or request via email. We will adjust your API or dashboard and address the monthly plan accordingly

12) May I use your API to build other commercial products?

Sure. But there are some limitations. Our data should not be published on any affiliate resources. Subscriber has to provide a list of products where our data will be used.

13) How can I pay for the subscription?

Bank money transfer or crypto. We will provide all required documents, contracts, invoices, etc.

14) Is it possible to negotiate to track additional games, and casinos without changing my subscription plan?

Yes. It is possible. Please contact our manager to negotiate an offer.
